

fiP solution plastique: Over 2/3 of the area already booked for 2014

Press release  
December 4th, 2013

Seven months before its start, the fiP solution plastique trade fair already looks to be a promising event with over 2/3 of the exhibition area already booked for 2014.

Ready to accommodate an increasingly diverse audience of professionals, the 600 fiP solution plastique exhibitors will be presenting a wide range of innovative technologies to give companies in the industry and contractors more competitive edge and productivity.

Complementary and cross-cutting technologies will also be presented at the Lyon Eurexpo from 17 to 20 June 2014.

Technologies are evolving and are combined to co-develop common or complementary solutions. The boundaries between plastics, composites, and elastomers have become increasingly intertwined and it now seems natural that the rubber and composites industries have joined the event. fiP solution composites and fiP solution caoutchouc will be devoted to them and provide specific content.

fiP solution plastique will also provide a comprehensive offering of industrial technologies and processes. It is the only trade fair in France that includes materials, machinery/equipment, moulds/tooling, design and engineering offices, processing, decoration/finishing services... many answers to the specific needs of industry professionals and contractors.

The fiP solution plastique trade fair has therefore officially kicked off!

The 2014 edition is 20% larger than its last edition in 2011 and promises to be a key event for the industry!

3D PRINT: held at the same time as fiP solution plastique  
New in 2014: 3D PRINT, the first French B2B trade fair exclusively devoted to additive manufacturing will be held at the same time as fiP solution plastique.
